

**Policy in the field of quality management systems, health protection and labor safety and environmental management systems**

Individual enterprise "Ynamly yol hyzmaty" began its activity in 2022, specializing in the provision of ship repair services, laboratory testing of non-destructive testing, service for life-saving appliances and in the field of information technology.

Our team includes highly qualified specialists in the field of ship repair. In order to meet the requirements of the client, our team uses the most modern and high-tech equipment. And for the implementation of continuous quality control of the services provided, we have our own laboratory.

Our information technology specialists provide services for designing, building and upgrading network infrastructure. We help promote your business by representing companies on various online platforms. Our workflow automation services will help your business adapt to the market faster.

**Our company motto is: Our employees are our value.**

We strive to ensure that working conditions and contribution to the development of our employees allow each employee to fully realize themselves and reveal their abilities. Our success-oriented employees are ready to contribute to the development of the company and influence the quality of the services provided. In our work, we are focused on safe working conditions and care about the health of our staff. All work processes are carried out taking into account the impact on the environment and all environmental aspects of the impact on the ecosystem are taken into account.

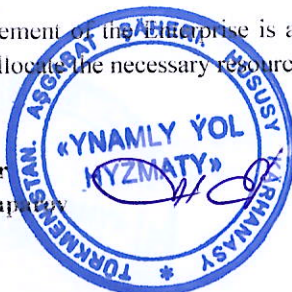

The management strategy of IE "Ynamly yol hyzmaty" is to maintain and improve the quality management system, labor safety and personnel health and environmental safety. We strive to meet all national and international requirements in this area.

**The top management of IE "Ynamly yol hyzmaty", realizing its responsibility to all interested parties, assumes the following obligations:**

- comply with the national requirements of Turkmenistan, international standards, as well as the internal requirements of the company in the field of labor protection and industrial safety, environmental protection, product quality and enterprise processes in their activities;
- continuously improve and increase the efficiency of quality management systems, ecology, labor protection and industrial safety to improve the performance of the enterprise;
- identify, evaluate and, if possible, minimize risks in the enterprise's activities;
- to improve technologies for the provision of services based on scientific and technical achievements to improve the quality of products, working conditions for workers, reduce and prevent the negative impact of production on the environment and the personnel of the enterprise;
- protect the environment by constantly reducing and preventing the anthropogenic impact on the environment from the processes of providing services;
- to search for ways of rational use of natural and energy resources;
- plan and implement measures to prevent accidents, incidents and accidents at hazardous production facilities, cases of deterioration in the health of workers, industrial injuries and occupational diseases;
- to ensure consultations with the personnel and their participation on issues of labor protection and industrial safety, as well as on improving the quality of service provision and environmental protection;
- to increase labor productivity by introducing modern methods of work and management methods.
- improve the satisfaction of consumers and other interested parties.
- to improve the system of quality control of the services provided, the exchange of information within the enterprise and interaction with the consumer.
- to create favorable and safe working conditions at the enterprise.

The top management of the enterprise is aware of the special responsibility for the implementation of the Policy and assumes obligations to allocate the necessary resources and create the necessary conditions at the Enterprise.
